Abstract of JP10178686

PROBLEM TO BE SOLVED: To transmit a remote control signal to other devices that are connected to a serial bus. **SOLUTION:** A remote control signal which is sent from a bidirectional remote control commander 27, e.g. one that instructs reproduction of a DVD (digital versatile disk) 24 is decoded by a digital TV 21 and transmitted to the DVD 24 after it is converted into a data format of IEEE-1394 serial bus 26. The DVD 24 returns response of the received remote control to the TV 21 and also starts a reproduction operation. A reproduced signal is supplied to the TV 21 through the bus 26. The TV 21 sends a signal that corresponds to response from the DVD 24 to the commander 27, also displays a video that corresponds to the reproduced signal and outputs sound.
